DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Ehman (EP 0 708 350).

As regards to claim, Ehman teaches a method for examining an object, including the steps of exciting the object by means of mechanical oscillations, and measuring the variation in time of the excursion from the rest state of voxels of the object which are subjected to the waves caused by the oscillations in the object (figures 1 and 3; page 2 and 3, lines 58-59, 1-19 page 5, 1-57). Further, Ehman teaches determining the non-linear distortion from the variation in time of the excursion, and evaluate the non-linear distortion (figure 5; page 2, lines 20-50, page 6, lines 1-40).

As regards to claims 2-8, Ehman further teaches steps to excite the object using periodic mechanical oscillations, by synchronizing the oscillations with the magnetic field gradients to receive repeated MR signals representing non-linear distortions using fundamental frequency or its harmonics while changing gradient directions, and on the basis of phase images determining amplitudes and forming the image depending on the ratio of the amplitudes to evaluate distortion values and voxel elasticity (figures 4-6, 9, 10).
